# GMF Stage deck

Slim and lightweight

# Prolyte GMF Stage deck

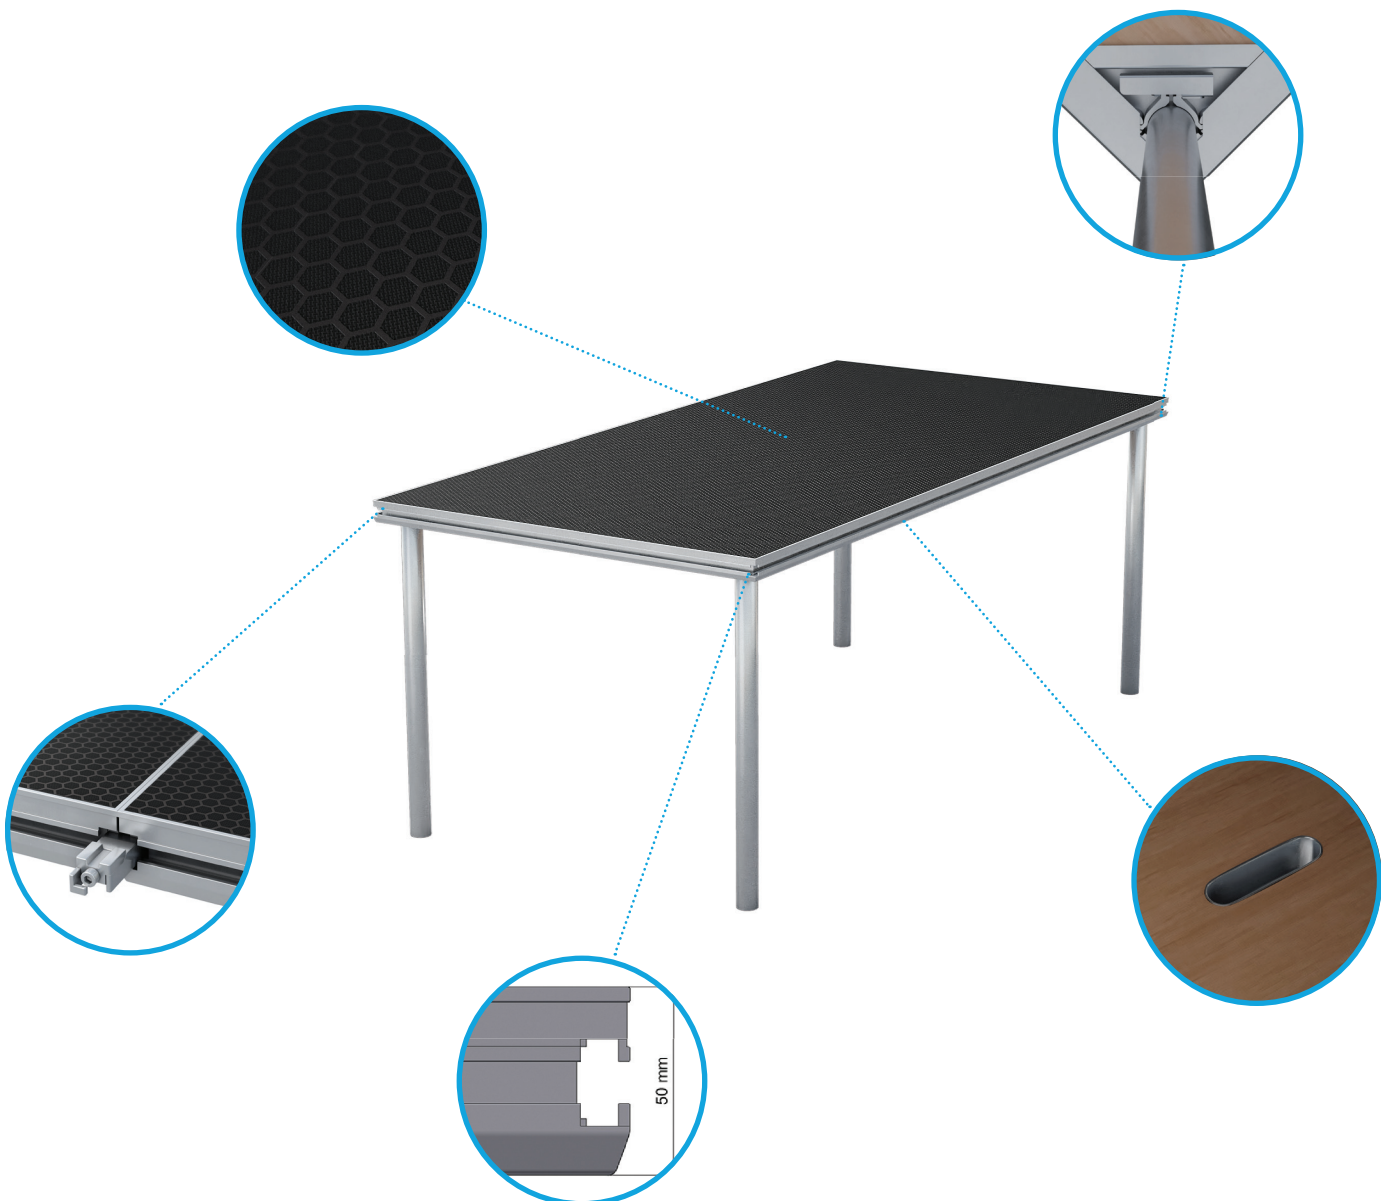

## GMF stage: A game changer for your events

The GMF stage deck ensures easiness of handling. With a self-weight of only 25kg for a standard 2x1 meter deck the weight is lowered with 10kg against the Prolyte Basicline deck and 14kg against the Topline deck.

Additionally, it comes equipped with built-in pockets for a secure grip, facilitating effortless transportation. The surface features the popular non-slip hexagon layer, guaranteeing safety in various environments.

Despite its lightweight design, it offers a loading capacity of 750kg/m<sup>2</sup>. The universal leg fitting accommodates both square as well as round leg types.

With a total deck height of only 50mm, it stands out as one of the lowest profiles available on the market, optimizing storage space and enhancing moveability for your company and crew.
